			ART UNIT	PAPER NUMBER

2634

DATE MAILED: 02/22/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/350,436	Applicant(s) JEONG, CHANG-RAE	
	Examiner Ted M. Wang	Art Unit 2634	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08 December 2005.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-11 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1, 2, 4-6, 10 and 11 is/are rejected.
- 7) ☒ Claim(s) 3 and 7-9 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 09 July 1999 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, filed on 12/8/2005, with respect to the rejection of claims 1-11 under 35 U.S.C. 102(b) has been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Eagan et al. (US 5,303,191).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 2, 4-6, 10, and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takahashi (US 4,661,946) in view of Eagan et al. (US 5,303,191).

- With regard claim 1, Takahashi discloses a digital switch module having encoding law conversion capability for converting pulse code modulation (PCM) signals (column 1 lines 45-63, and column 3 lines 56-65) from either one of two different modulation standards to the other one of said two different modulation standards (Fig.1 elements 13 and 14) in a system characterized by having a plurality of communication channels with each channel having a plurality of input digital signals modulated by said one of said two different modulation standards

(column 2 line 62 – column 3 line 19 and Fig.1 elements 10, 13, and 14) that comprise:

a channel selector for generating a channel select signal (Fig.3 elements 29, 32, and 34) for identifying said at least one channel of the multiple channels in said system (Fig.2 elements 26-31, Fig.3 elements 29, 32-34, and column 2 line 62 – column 3 line 6, column 3 line 20 – column 5 line 51, and Tables 1-4);

at least one codec (Fig.1-4 element 24) means for selectively converting said identified input digital signals received in said at least one channel from said one of said two different modulation standards to the other one of said two different modulation standards in response to said channel select signal (Fig. 1-4 elements 24 and 29, and column 2 line 62 – column 3 line 40),

a plurality of output voice/data signals, being converted/ driven by encoding conversion memory 24, have been selectively released and transmitted (column 3 line 7- column 5 line 51) said input digital signal (Fig. 1-4 elements 24 and column 3 line 7 – column 6 line 39) modulated by said one of said two different modulation standards (Fig.1 elements 10, 13, and 14 and column 2 line 62 – column 3 line 19) and said converted input digital signal to the other one of said two different modulation standards by said codec means in response to said channel select signal (Fig. 1-4 elements 24 and 29, and column 2 line 62 – column 3 line 40, column 3 line 41 – column 5 line 51, and column 6 lines 1-46) by the control memory 29.

In column 2 line 62 – column 3 line 6, Takahashi discloses that the digital switch module 10 includes a digital encoding law conversion memory 24, which controls encoding law conversion between the A-law and the μ -law trunks 13 and 14. The digital switch module 10 performs time division switching, whereby data is switched from one of the trunks, e.g., 13, to the other trunk 14 in time slots. A control memory 29 controls the conversion performed by the encoding law conversion memory 24 within each time slot. It is clear that at each time slot there will be only one channel for digital encoding law conversion.

Takahashi discloses all of the subject matter as described in the above paragraph except for specifically teaching a plurality of mixers for selectively releasing and transmitting said input digital signal modulated by said one of said two different modulation standards and said converted input digital signal to the other one of said two different modulation standards by said codec means in response to said channel select signal.

However, by examining the disclosure of the instant application that the mixer discloses by the instant application is nothing but a data output buffer circuit controlled by an enable signal that can be integrated into a memory or ROM device.

Eagan et al. teaches a memory (Fig.1 element 30 and column 4 line 28) integrated with a data output buffer (Fig.1 element 38 and column 4 line 65 – column 5 line 15, and column 6 line 29-43) controlled by an enable signal (Fig.3 element SE or /SE) derived by Read/Write logic (Fig.1 element 35).

It is desirable to have a data output buffer integrated inside a memory in order to improve the time synchronization of the output data and reduce the size of the PCB. Therefore, It would have been obvious to one of ordinary skill in the art at the time of the invention was made to include a data output buffer as taught by Eagan et al. into Takahashi's read only memory (ROM) so as to improve the time synchronization of the output data and reduce the size of the PCB.

- With regard claim 2, Takahashi further discloses a first codec means for converting said input digital signal modulated by said one of two different modulation standards received in said identified at least one channel of the multiple channels into an analog signal (Fig.4 2nd box A-law to μ -law conversion) in response to said channel select signal (Fig.3 elements 29, 33, 34 and Table 3), and

a second codec means for converting said converted analog signal by said first codec means into corresponding digital signals in accordance with the other of said two different modulation standards (Fig.4 4th box μ -law to A-law conversion) in response to said channel select signal (Fig.3 elements 29, 33, 34 and Table 3).

- With regard claim 4, Takahashi further discloses that channel select signal is generated in response to a frame sync signal, a clock signal, and a read address controlled by said clock signal for reading an output data or in response to each time slot (Fig.3 elements 24,29, 32-34, and column 2 line 62 – column 3 line 6, and column 5 lines 26-51).

Art Unit: 2634

- With regard claim 5, Takahashi further discloses wherein said channel select signal is synchronized with said at least one channel of the multiple channels containing said input digital signals modulated by said one of said two different modulation standards (Fig.3 elements 24,29, 32-34, and column 2 line 62 – column 3 line 6). In column 2 line 62 – column 3 line 6, Takahashi discloses that the digital switch module 10 includes a digital encoding law conversion memory 24, which controls encoding law conversion between the A-law and the μ -law trunks 13 and 14. The digital switch module 10 performs time division switching, whereby data is switched from one of the trunks, e.g., 13, to the other trunk 14 in time slots. A control memory 29 controls the conversion performed by the encoding law conversion memory 24 within each time slot. It is clear that at each time slot there will be only one channel for digital encoding law conversion and the channel select signal is synchronized with said at least one channel of the multiple channels containing said input digital signals modulated by said one of said two different modulation standards.
- With regard claim 6, all limitation is contained in claim 1 and 2. The explanation of all the limitation is already addressed in the above paragraph.
- In regard claim 10, all limitation is contained in claim 4. The explanation of all the limitation is already addressed in the above paragraph.
- In regard claim 11, all limitation is contained in claim 5. The explanation of all the limitation is already addressed in the above paragraph.

Allowable Subject Matter

4. Claims 3 and 7-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ted M. Wang whose telephone number is 571-272-3053. The examiner can normally be reached on M-F, 7:30 AM to 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chieh Fan can be reached on 571-272-3042. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
